

Jockford Fosgate®

Product Advisory

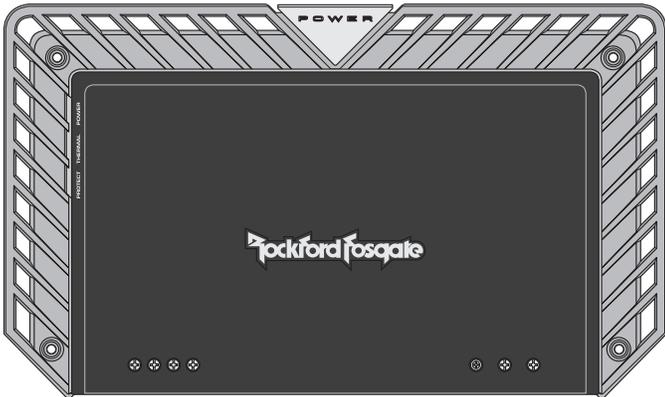

All 2007 PUNCH and POWER amplifiers have the capability of using an optional remote PEQ to control **both bass & treble** when configured in full-range mode (crossover set to All-Pass). For dual-amplifier systems utilizing the built-in crossovers, you can achieve maximum control by using dedicated remote PEQs.

Use one remote PEQ on the BASS amp powering subwoofers, and a second remote PEQ on the TREBLE amp powering midrange & tweeters!

When the crossover is set to LP (low-pass) the PEQ boosts BASS response. When the crossover is set to HP (high-pass) the PEQ works to boost TREBLE response.

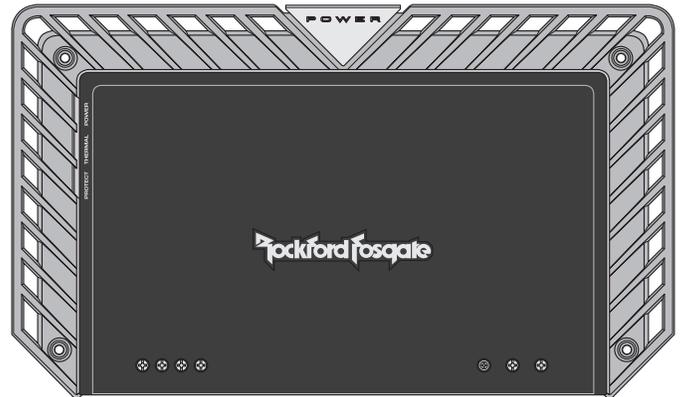

BASS AMPLIFIER

Variable from 0dB to +18dB @ 45Hz

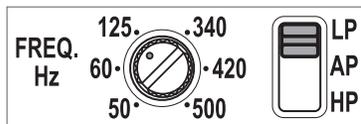

TREBLE AMPLIFIER

Variable from 0dB to +12dB @ 12KHz

Crossover set to LP (Low-Pass.)

Crossover set to HP (High-Pass.)
